h.prime²
for junior doctors
hospital edition

From 2017 the CCLHD Workplace Based Assessment (WBA) candidates have completed all assessments using the HPrime 2 System. HPrime 2 is an easy to use and efficient electronic platform that enables the WBA program to ensure that each assessment meets the Australian Medical Council (AMC) guidelines.

From initial consultation HPrime 2 has provided ongoing immediate assistance with any of our concerns and has been able to meet all of our various requests thus tailoring the program to meet our needs.

HPrime 2 has enabled improved efficiency and ensures that we are meeting the AMC requirements. This program has an easy to use interface and vast versatility, the responsiveness of the support team has been outstanding and is a major benefit of this fantastic program.

Nikita Sidhom, WBA Project Officer

NSW GOVERNMENT | **Health** Central Coast Local Health District

A fully customisable online learning and e-portfolio platform

Empowers junior doctors and assessors with learning, resource sharing and assessment.

H.Prime 2 is an online e-portfolio and assessment platform designed to promote and reinforce self-directed learning of junior doctors in the hospital environment. It not only manages but enforces the timely submissions of forms and documents.

With our dynamic form module, your administrator can design various standard forms which are required for junior doctors during their training. H.Prime 2 gives you many pre-built Australian Medical Council (AMC) and Health Education & Training Institute (HETI) forms such as Mini-CEX, Case Based Discussion, Direct Observation of Procedural Skill, Multisource Feedback, 360 Self Assessment and End of Term Assessment.

With **H.Prime 2** working for your organisation, any supervisor or administrator can access relevant junior doctor portfolios, forms, check what training requirements are outstanding for junior doctors, submit supervisor forms, share resources and communicate via email and instant message functionality. Additional modules overleaf, can further enhance H.Prime 2's functionality and value for your organisation.

Users	Pricing per user, per month (ex. GST)
Junior Doctors	**$15**
Assessors	**$10**
Administrators	**$10**
500+ users	**P.O.A**

Once only setup cost: $3,000 (ex. GST)

E-Portfolio & Assessment Platform

JUNIOR DOCTORS **I** ASSESSORS **I** ADMINISTRATORS

DYNAMIC / STANDARD FORMS

H.Prime 2 provides many pre-built Australian Medical Council (AMC) and Health Education & Training Institute (HETI) forms such as Mini-CEX, Case Based Discussion, Direct Observation of Procedural Skill, Multisource Feedback, 360 Self Assessment and End of Term Assessment. Furthermore, hospital administrators can design any form using the form designer interface, with a range of generic and data bound form fields. Basic form workflows can be customised according to specific hospital needs.

REQUIREMENTS

Administrators can create common training requirements for junior doctors using dynamic forms based on one or more disciplines or training attributes. The system will automatically add these requirements to a junior doctor's e-portfolio.

E-PORTFOLIO

Junior doctors can manage their own portfolio by adding multiple documents, photos, links, videos and presentations in various portfolio sections. They can also add term experience details and attach relevant files. They can send feedback requests to their supervisor for in-progress or planned learning items.

EVENTS MANAGEMENT

Administrators can create and manage events such as workshops, lectures, assessments and meetings. The system also allows administrators to manage event invitations, RSVPs, event attendance, event notifications, reminders and event cancellations. It provides a full calendar view to all types of users roles to show upcoming events and its details. Event attendees can also get notifications of the event via email and mobile SMS.

ROSTERING

A powerful online roster module in H.Prime 2 allows the administrator to create and manage rosters with ease. Administrator can assign multiple shifts for a user in bulk and create roster notes. The system checks for any overlapping shift or errors that may have occurred before publishing a roster. It can notify staff via email and mobile SMS with all the shift details. Administrators have the ability to pull various types of reports from a roster and attendance. All staff have the ability to see the full roster online on their dashboards.

LEARNING PLANNER

This module allows junior doctors to plan, organise and track their learning. It also uses the Australian Curriculum Framework (ACF) list to provide junior doctors with the ability to utilise the national curriculum. Junior doctors can add learning items or experience in particular skills and procedures, while allowing supervisors and medical educators the ability to see learning plans and provide feedback to their junior doctors.

RESOURCE SHARE

Documents such as policy documents, printable forms and educational resources such as video tutorials and external links can be uploaded and shared with specific groups of users.

COMMUNICATION

Hospital administrators can search for users in H.Prime 2 based on various filters and send emails to their registered and/or external email address. All H.Prime 2 users are able to manage their own contact details. Junior doctors, supervisors and medical educators also have the ability to send instant messages to specific H.Prime 2 users.

ROTATIONS

Hospital administrators can create common sets of rotations as templates for junior doctors to minimise administration time to create multiple rotations for multiple doctors. Administrators can also manage and customise the available list of disciplines, and junior doctors can have customised rotations that vary from the templates.

CUSTOMISATION & INTEGRATION

H.Prime 2 is fully customisable and it has the ability to adapt to a hospital's specific needs. JAM Web Services can build custom modules and integrate H.Prime 2 with any 3rd party system to enable data exchange and makes things easier for hospitals.
